Art Unit: 1724

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-20, drawn to a process for removing a contaminant from a fluid, classified in class 210, subclass 662.
- II. Claims 21-34, drawn to a system comprising a catalyst and an adsorbent, classified in class 210, subclass 266.

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus of Group II could be used to carry out another process, different from that of Group I. For example, this system could be used to catalytically crack hydrocarbons, instead of to remove contaminants from a fluid.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and divergent subject matter, and because the searches for the individual Groups are not coextensive, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

In addition to the above restriction requirement, an election of species is also required.

This application contains claims directed to the following patentably distinct predetermined operating parameter species: (1) temperature; and (2) time period. The species

Art Unit: 1724

are independent or distinct because temperature and time period measurements are significantly different from one another.

Applicant is required under 35 U.S.C. 121 to elect a single predetermined operating parameter species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 2, 4-6, 14-22, 26 and 31-34 appear to be generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, Applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, Applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).
